

Sample document, made up for the SpecialMe demo.

Sample Children's Clinic, Autism Spectrum Center

1 Clinic Road, Anytown, ST 00000

Date: 9/15/2026

Re: Sample Student, age 7

To whom it may concern:

Sample Student was seen on 9/1/2026 and 9/8/2026 for a comprehensive diagnostic evaluation. Based on the evaluation, observations and parent interview, the student meets the criteria for Autism Spectrum Disorder (ASD), Level 2, with accompanying language impairment. The student also shows symptoms of ADHD. These symptoms cause significant difficulty in social communication, daily routines and other important areas of functioning. These symptoms are not better explained by Intellectual Disability (ID) or Global Developmental Delay (GDD).

It is imperative that consistent Applied Behavioral Analysis (ABA) be provided to the student as part of the treatment plan. ABA has long been proven to be the leading treatment for individuals diagnosed with ASD who require intensive support with language, behavior and socialization. The recommendation is 20-25 hours of ABA per week. I also recommend a speech-language re-evaluation and a review of the school IEP within 60 days.

If you have any questions or concerns, please do not hesitate to contact me at 555-0199. I will continue to monitor progress with my team in the Autism Spectrum Center.

Sincerely,

Sample Clinician, MD
